

OPEN SEMINAR SERIES

**Thursday 26 May 2011
12:00 – 13:00**

**SEERC Conference Room
3rd Floor Strategakis Bldg**

“Health Informatics: opportunities and challenges for the use of Information and Communication Technologies in health care”

**By
Dr. Peter Bath**

Reader in Health Informatics, Information School
Director, Centre for Health Information Management Research,
University of Sheffield, UK

ABSTRACT

Rapid developments in the application of information and communication technologies in healthcare are changing the ways in which patient data are captured, stored, accessed and shared within health and medicine. Health Informatics concerns the ways in which information and communication technologies are used to improve patient health and wellbeing through the more effective use of information by health care professionals, health service managers. This seminar discusses the meaning of health informatics and outline how health informatics applications are being developed in the UK through the "Connecting for Health" programme.

The seminar series is open to all members of staff and students of CITY and to any externals that wish to attend.
