“Development of Clusters in South-East Europe: the Case of Bosnia and Herzegovina”

by

Amira Ramhorst

PhD Student

ABSTRACT

The objective of this exploratory study of clusters in Bosnia and Herzegovina (BiH) is to examine the nature of network relations, knowledge spillovers and innovativeness of BiH firms and the role geography and trust play in facilitating these. To understand the process of knowledge spillovers and innovation, this research will place firm level learning at the centre of cluster analyses with the objective of understanding how firm-level and cluster-level and network processes interact.

This work can serve as a source of valuable information for other researchers, development practitioners and policy makers who design policies promoting clustering and inter-firm networks in South East Europe and in BiH in particular.

The seminar series is open to all members of staff and students of CITY and to public that wish to attend.
