OPEN SEMINAR SERIES

THURSDAY 21 JUNE 2007
13:00 – 14:00

SEERC Seminar Room
SEERC Bldg

"Web Application Architectures"

By

Mr. Patroklos Papapetrou
R& D Department, OTS

ABSTRACT

The rapid development and advancement of Web Applications and the increasing need for more flexibility and availability of the software across the Internet have not bypassed the evolution of Web Application Architectures. Since the first web sites appeared in simple HTML, the way that web software is currently developed and deployed has changed a lot. Many different approaches present architectural frameworks but they are all based on the idea of multiple and autonomous layers. The presentation covers the historical background of the topic, discusses the most popular architectures used today by explaining their key points and demonstrates the similarities and differences with the "traditional" software.

The seminar series is open to all members of staff and students of CITY and to any externals that wish to attend.
